BINGHAMTON NEW YORK 13901

607-723-9509

The Experimental Television Center Ltd. is a not-for-profit educational corporation with Federal tax exempt status which is supported in part by the New York State Council on the Arts and the National Endowment for the Arts. Organized in 1971 the Center offers several programs which are designed to promote the production, exhibition, study and research of video as an art form.

The production program makes available small format video systems to professional independent videomakers interested in a personal exploration of the art and interrelationships between video and the other visual and performing arts. Systems include a variety of image processing devices such as colorizers and synthesizers as well as recording and display equipment. In fiscal 1976-1977 the production facility was utilized by videomakers from the United States as well as Canada, Australia, Japan, Sweden and France. The majority of projects assisted by the Center involve the creation and closed-circuit display of tapes, the utilization of live interactive video systems or tape displays as an integral part of works in other art forms such as theater or dance as well as the use of video in environmental or sculptural works. Artists using the facility have complete artistic and technical control over their works; many of the tapes produced at the Center are distributed through galleries or by the individuals and have been exhibited at many museums in the United States and abroad.

In 1976-1977 the Center directly served over 100 separate individuals and producing organizations; this figure includes only those utilizing equipment for independent production work and does not include those individuals participating in other aspects of the Center's activities such as the workshop, exhibition or screening programs. Of this number, 60% utilized studio equipment at the Center in the production of tapes, while the remaining 40% used equipment out-of-house. Approximately 85% of the in-house production employed one or more of the synthesizer/colorizer systems. Out-of-house production included the use of single and multiple camera systems for recording and multiple input switching with monitor matrix for display. Of this total number of individuals and groups using the Center's production facilities, 86% used equipment for more than a two day period while over half scheduled equipment for more than one work period during the year. Over 50% of the total number fell into both categories, scheduling multiple bookings throughout the year with work periods exceeding two days in length; of this number, approximately 70% were individuals using in-house studio equipment.

The instruction program at the Center seeks to encourage a greater understanding of the creative potential of small format video systems by artists, students and educators and the general public. The Center offers a regularly scheduled series of workshops concerning basic video systems and processes

as well as advanced instruction in electronic image systems. Attendance at these workshops or demonstration of prior equipment experience is necessary before an individual may use the production facility. In conjunction with the Educational Services Department of Roberson Center for the Arts and Sciences in Binghamton, the Center has designed several workshops ranging from one to three days in length which are of particular interest to school systems. Groups with specific interests not addressed by these general workshops are invited to consult with the Center in the design of a single workshop or series which meets the needs and experiences of the group.

The workshop program at the Center includes a five week introduction to video and a five week advanced seminar; in addition, a number of other workshops are held throughout the year dealing with such topics as the generation of sound for the electronic image or the use of microprocessors in the arts. Fees for all of these workshops vary; they may be conducted either at the Center or at a host site. In fiscal year 1976-1977 over 1600 people participated in the workshop program; approximately 10% of those individuals attended workshops which met regularly for a minimum of five weeks while 15% of the people were involved in workshops consisting of at least three meetings.

The Center sponsors or participates in exhibitions and performances of new video works which are conducted either at the Center or at museums and galleries throughout the country and abroad. As a sponsoring agency the Center presents the work of individuals who have participated in the production program through shows such as 'Information, Works and Activities' at the Everson Museum of Art in Syracuse, New York. Included in this presentation were several installations, a live video performance, a small workshop program concerning video synthesis and the computer-based video system as well as a five hour tape show presenting excerpted works by individuals and groups which have produced at the Center. The Center began its own exhibition series, presenting seven evenings of tape screenings during the winter and spring of 1977. The individuals represented in this program included Steven Kolpan, Barbara Buckner, Richard Simmons and Beryl Korot; tapes produced by the Creative Artists Fellowship Program award recipients for 1977 were also presented.

As a supporting organization the Center makes equipment and technical assistance available to arts organizations for the presentation of works which incorporate video and develop relationships between video and the other visual and performing arts. The Center assisted in the presentation of exhibits such as 'Videofictive' at the State University of New York at Binghamton; this series showcased the video works of Robert Longo, Vito Acconci and Ed Bowes.

Individual artists who have produced at the Center are also active and have presented videotapes at galleries and museums throughout New York State including such places as the Everson Museum of Art in Syracuse, Anthology Film Archives, The Kitchen and the Museum of Modern Art in New York City, Roberson Center for the Arts and Sciences in Binghamton, Media Study/ Buffalo and the Herbert F. Johnson Museum in Ithaca; tapes have also been exhibited throughout the country and in Canada, Sweden and West Germany.

The artist in residence program has been an important link in the continued development of the production, exhibition and instruction programs. Artists who participate in this program have extensive practical knowledge of the various image processing systems as well as a personal understanding of the aesthetic concerns of the visiting artists.

The library at the Center contains an archive of over 275 videotapes as well as books and articles concerning the electronic and cinematic arts. Materials are available at the Center for study purposes but are not lent, rented or duplicated. Although the Center does not distribute tapes, a videotape representing the work of a number of artists who have produced at the Center is being prepared for distribution. Many artists who work at the Center have made use of the numerous distribution channels already in existence or are distributing as individuals. The Center is in the process of compiling a tape catalog of materials produced here.

The Center sponsors two internship programs. The first invites students from other universities and colleges to spend one or two semesters working at the Center on projects for academic credit. In fiscal 1976-1977 two graduate students from the State University of New York at Buffalo assisted in the exhibition and workshop programs. In the second program, the Center is the sponsoring agency for an internship offered through Off Campus College, State University of New York at Binghamton. The purpose of these study situations is to place the interns in a work environment where they become contributing members of the organization. Entering its second year, this program has had the maximum number of participants each semester.

The research program incorporates both the development of theoretical solutions to hardware and design problems as well as the actual construction of tools and systems which are then utilized by artists in the production program. Equipment now available which was developed under this program includes a four channel analog colorizer, switching matrix, keyers and spatial and intensity digitizer. In order to reach a wider audience, the Center is in the process of preparing the results of four years of research for distribution. Since 1976 the Center has been working on the development of a microprocessor system for computer control over a variety of image processing components. With support from the National Endowment for the Arts and the New York State Council on the Arts the first phase of the hardware aspect of this project is completed, and the system is operational and available for use at the Center. The goal of the software aspect of the project is the development of an interactive language which is directly applicable to the arts and easily used by artists. The second phase of this project includes continued software development and the publication of theoretical as well as technical information about the results of this project.

The photography program at the Center for fiscal year 1976-1977 included two different workshops, Basic Photography and Seminar in Advanced Photographic

Processes, each conducted twice during the year. Taught by Evangelos Dousmanis, an independent photographer from the area, each workshop ran for a ten week period and was supported in part by Special Programs, New York State Council on the Arts. This program was designed specifically for individuals from within the urban area and involved approximately 60 individuals. An exhibition concluding this program presented the work of the participants and was displayed at the Center during the month of June 1977. A photographic exhibition program began in August 1976 and presented to the public the work of eight independent photographers, two of whom were exploring images generated by various video systems.
